

Overview

Our dynamic teams in Australia, New Zealand, Malaysia and South Africa are renowned for taking leading innovations to organisations wishing to differentiate their services and projects through integration of new geospatial digital content and web services.

We offer several business service models for the use of our valuable geospatial data content:

Service Oriented – continuous service

- We host and serve our digital content into your application. Our web services include powerful geospatial analysis tools valuable to a range of market sectors
- You host and serve our digital content into your application

Project Oriented – one off requirement

- We supply the geospatial data sets you wish to utilise for a particular project extent/scope of works: common examples include design and planning applications

If your services or projects require unique and new data sets, our extensive land and aerial survey resources can be deployed to capture and supply customised options to meet your requirements.

Our diverse range of services include: SiteSeeV™ 360° Spherical Imaging, Pictometry® 3D Models and Multiangle Oblique Imagery; Web Services, Data Integrating Web Browser, Terrestrial Laser Scanning, Airborne LiDAR and High Resolution Satellite Imagery, eg. GeoEye and RapidEye.
